HEALTHY  
CLEAN  
WORKPLACES

Think about how quickly dust builds up on a tabletop or sill - that same dust is also settling on your upholstery and carpets.

We use the latest hot water extraction carpet cleaning machines that remove as much soil as possible without damaging the carpet or over saturating.

### **Carpet Cleaning Maintenance Plans**

Our ongoing maintenance plans not only prolong the life of your carpet, they improve the health and hygiene of your workplace and they save you money.

### **Comprehensive Cleaning Process**

CrestClean's personnel are trained carpet cleaning specialists. Firstly we pre-inspect, pre-vacuum and identify the type of carpet to determine how the carpet fibre reacts to moisture, chemicals and temperature.

We use the hot water extraction process to ensure as much soil as possible is removed without damaging the carpet or over saturating, and without leaving detergent residue behind. To finish, a carpet rake and commercial air mover is used to ensure your carpet is groomed and dried.

### **Upholstery Cleaning**

We recommend that office chairs with fabric coverings should be cleaned annually, to ensure they remain looking clean and presentable.

### **Environmental Choice Approved Service**

CrestClean's carpet cleaning service has third party accreditation from Environmental Choice, which independently audits products and services to verify they meet their environmental standards.

### **SafeClean® Health, Safety and Environmental Management System**

We've developed an industry leading health and safety system specifically designed to minimise the risks of our cleaning at your premises.

SafeClean® complies with ASNZ: 4801, ISO: 14001, Contractor Pre-qualification and ACC Workplace Safety Management Practices.

Health, Safety & Environmental Management

### **Carpet Cleaning Documentation**
