

# Pure Water Window Cleaning

## **CrestClean's Pure Water Window Cleaning provides cost-effective window cleaning for buildings up to 4 storeys high.**

Along with great results, no chemicals are used which is good for the environment and one of the reasons that this service is licensed by Environmental Choice NZ.

Our specialised window cleaning system converts tap water into 'pure water' by passing it through filters and resins which remove any minerals that can leave deposits or stains on windows.

Health and safety is simplified because ladders and platforms are not required to access higher windows, and the price is less because the extra equipment is not needed.

“ We bring more than just a squeaky clean attitude to your windows and glass cleaning – we bring innovation. ”

### Chemical-free window cleaning

No chemicals are used with Pure Water Window Cleaning. The mineral deposits in tap water are filtered, allowing the water to clean better at an ionic level. The results are clearly cleaner windows without spots or streaks, without harming the environment.

### Clean up to 4 storeys high without platforms

With the latest carbon fibre extendable poles we can clean high windows without using platform lifts or ladders. No power is required – only a hose tap.

### Health and Safety compliant

Risks and hazards are dramatically reduced when compared with conventional window cleaning processes. Our operators work from the ground only. We also prepare site-specific safety plans including pedestrian and traffic management.

This Pure Water Window Cleaning service meets the strict environmental criteria as set by Environmental Choice NZ.

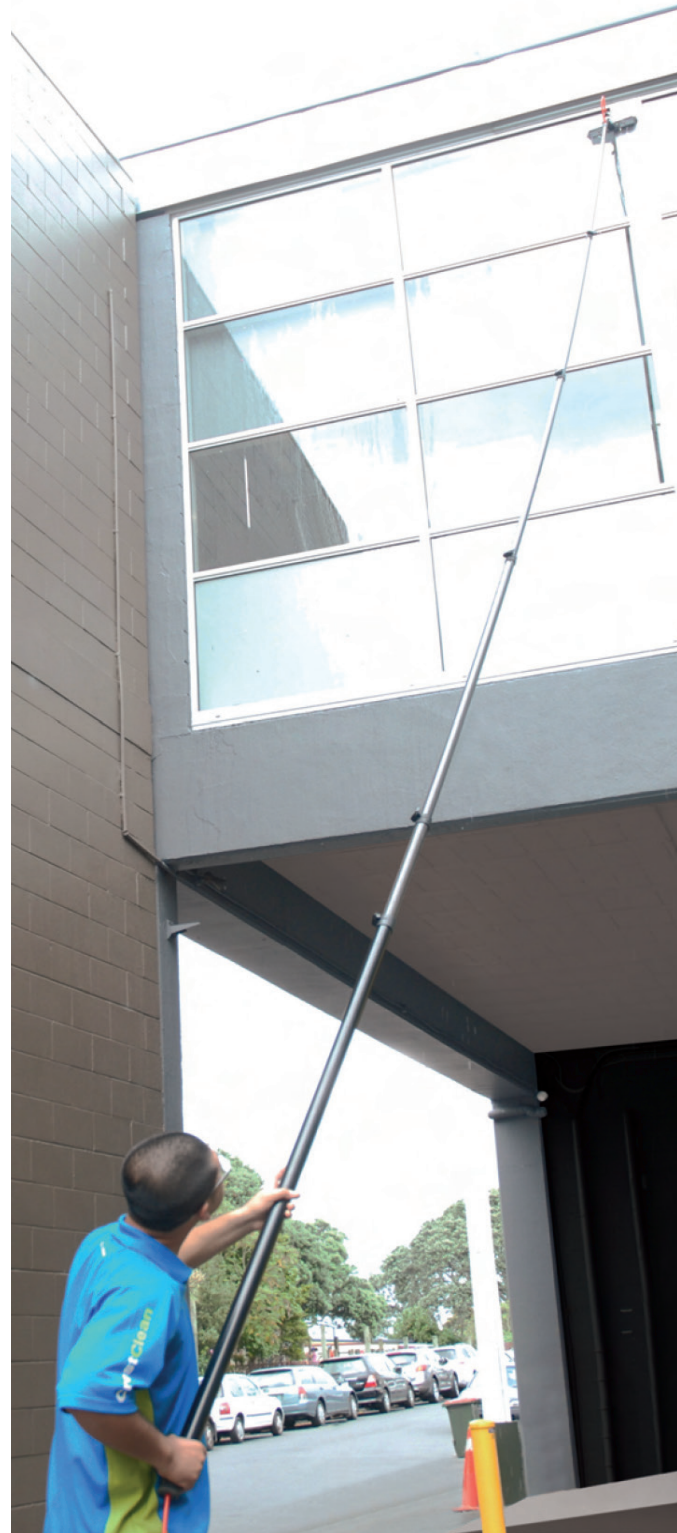

Cleaning Services  
Licence No. 4517141

We deploy 'Safe Systems of Work' for each service that our personnel carry out.

Our Pure Water Window Cleaning operators receive advanced training to ensure they deliver a quality result.
